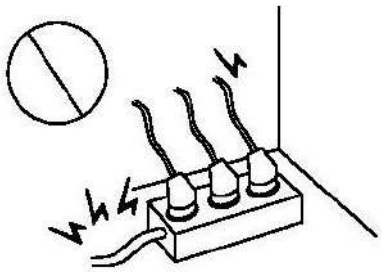
TABLE OF CONTENTS

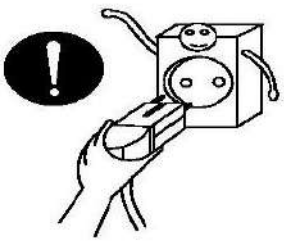
Section 1　General Information

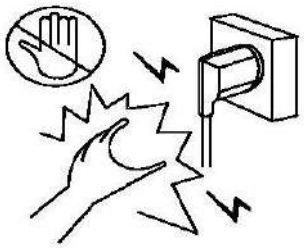
1-1. How to use Power Cord ?

1-1-1. Be sure not put more plug in the socket. Please use the dedicated outlet.
-Overheated wire, which will cause fire or start malfunction

1-1-2. Wet hands off the power.
- Life is in danger







1-2. How to disconnect the power cord?

☞ To prohibit leakage or electric shock, please use the prescript method to connect ground.

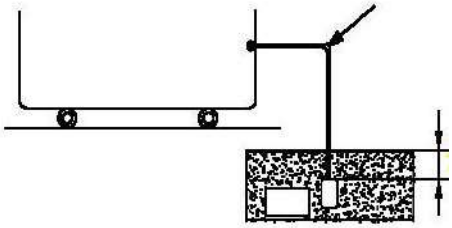
1-2-1. If there are grounds connectors for 220v units, units don't need ground while outlet is for AC 220v. (Please make sure that there are grounds in buildings, then units can use AC 220v outlets with grounds connectors.)

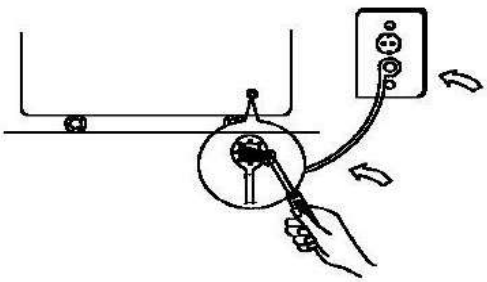
1-2-2. The power is 220v without ground connector, use dedicated outlet to ground.

A. Please connect earth wire to copper, which will be covered under moisture ground. (The depth is more than 17cm)

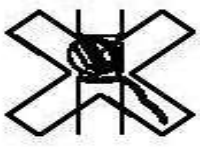
- copper item : thickness : >0.7mm square: >900cm^2

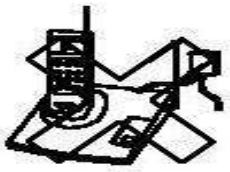
B. Please connect the dedicated ground outlet.





1-2-3. Prohibition ground places





Gas pipe　　**Water-pipe**　　**Telephone lines**

Section 2　Installation Instructions

2-1. How to remove packing instructions

1	Please set doors of products towards the same direction, tie the packing stick with ropes.	2	Please cut the PE bag, then remove the packing box.	3	Please remove all the packing parts around the products.	4	Lift up the product, disassemble four screws, then remove the packing base.	5	Install the fours casters, insert the kitchen board into the slot.	6	Caution: 1> Please use dedicated outlet. 2> Please let the unit is grounded while you work. 3> Please connect the power with leakage protector.	
2-2. Location Product

1	Be sure to set the unit in door! To prevent damage, leakage!	2	Be sure that the location be chosen has a strong enough floor to support total weight of the cabinet and any other contents. The uneven will make noise and shake!	3	Be sure to avoid corrosive environment! It will shorten the life of the unit	4	Be sure no object is on top of the product! The objects will fall to hit the unit!	5	Be sure to avoid damp and dusty environment! Electric shock	6	Be sure the unit is away from the wall at least 15 ㎝! Good air circulation	7	Be sure the power cord is connected to the proper voltage! The Product is special for 220V It can't be used with the voltage of 110V Please connect the power with leakage protector!	8	Please use the casters or legs.

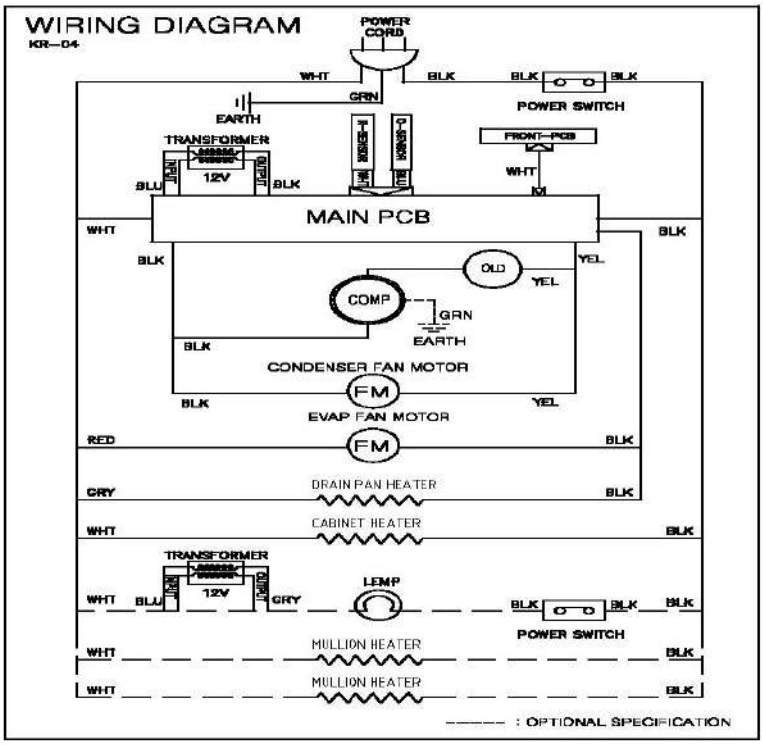
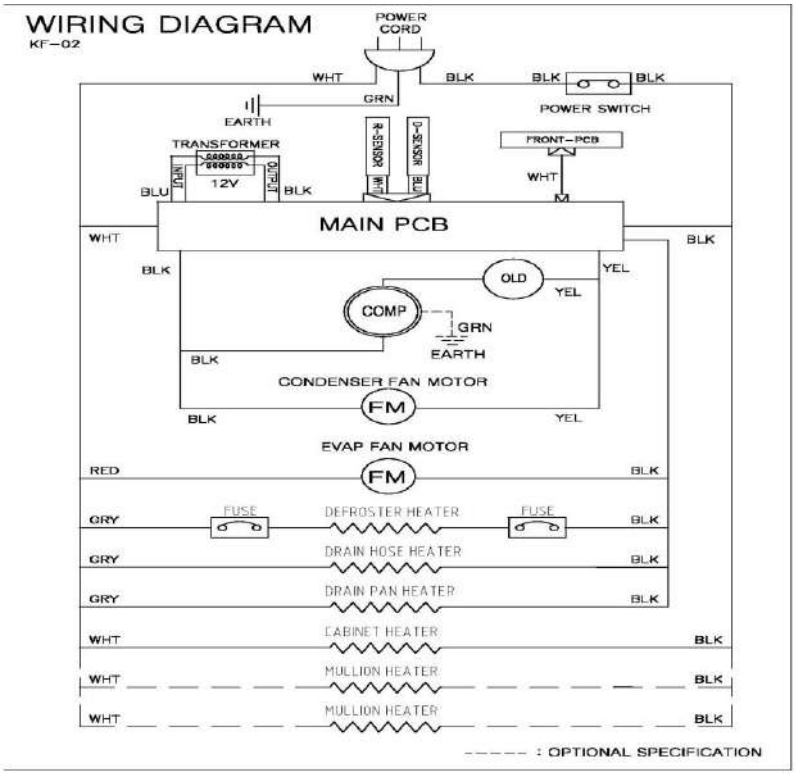
3-2. Wiring Diagram

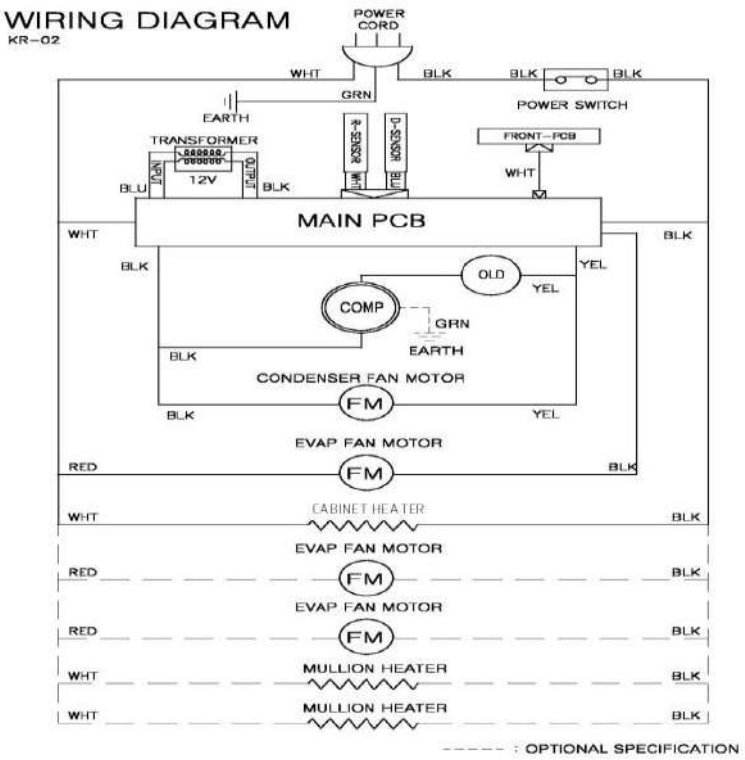
3-2-1 (KUR 9-1, KUR12-2, KUR15-2, KUR18-3 KGR 9-1, KGR12-2, KGR15-2, KGR18-3)



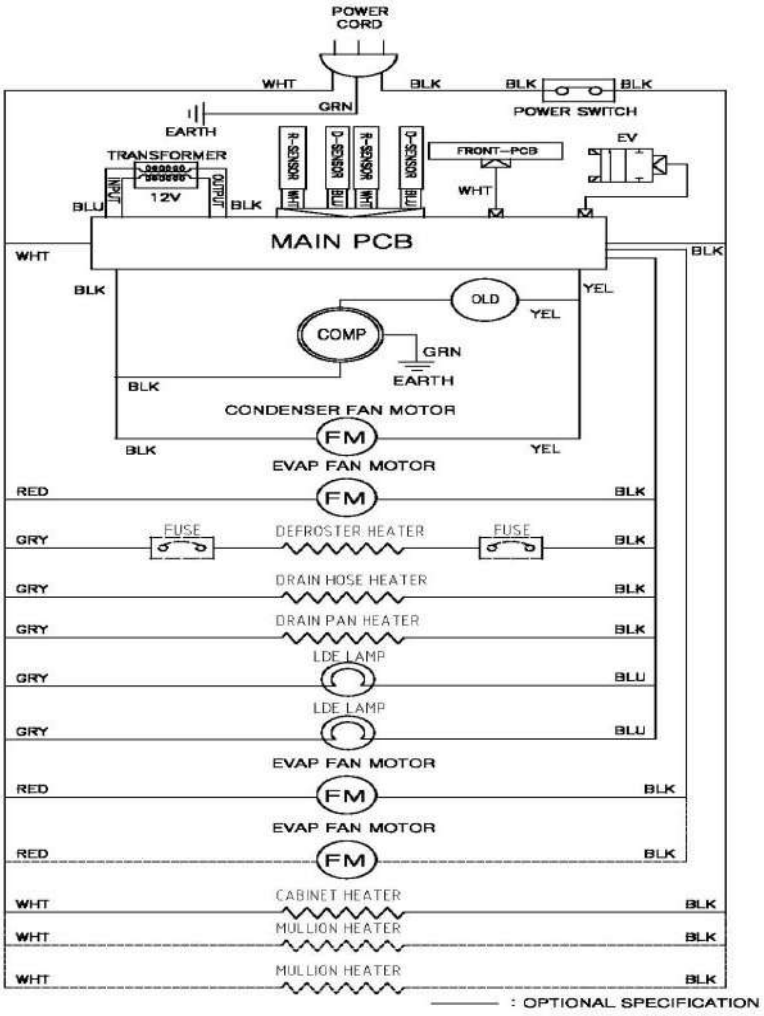
3-2-2. Wiring Diagram (KUF 9-1, KUF12-2, KUF15-2, KUF18-3)



3-2-3. Wiring Diagram (KHR 9-1, KHR12-2, KHR15-2, KHR18-3 KSR 9-1, KSR12-2, KSR15-2, KSR18-3)



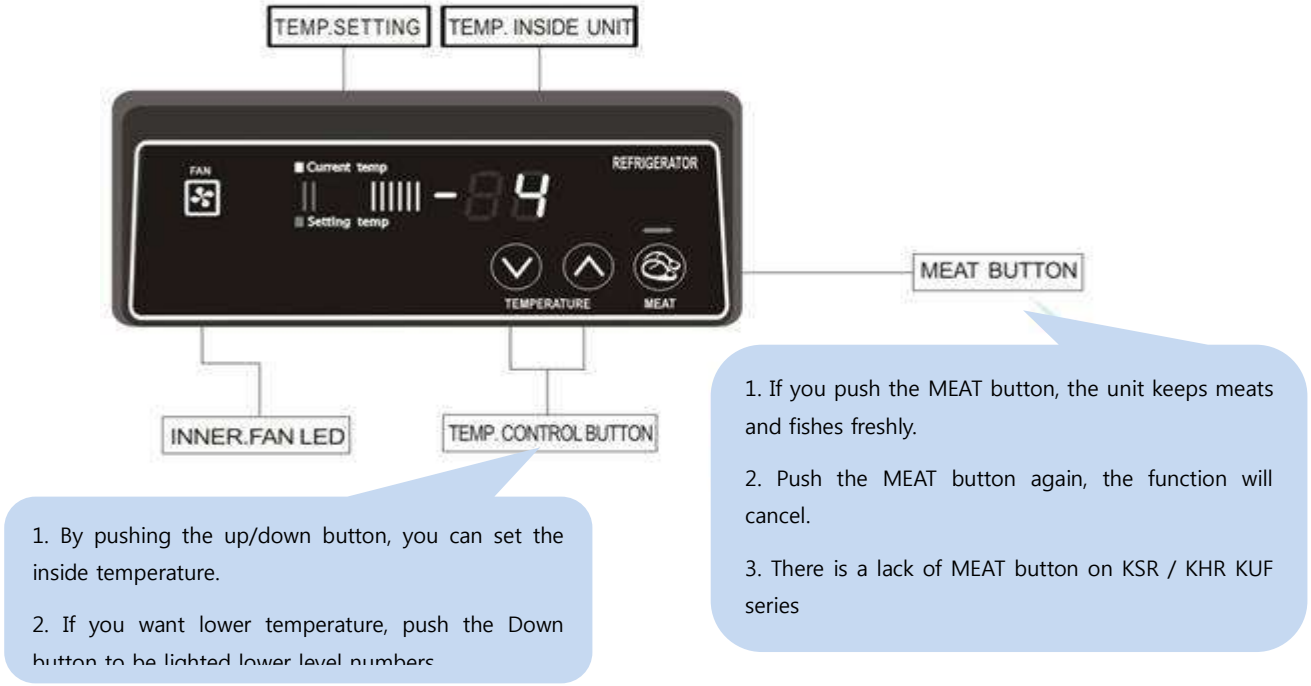
3-2-4. Wiring Diagram (KURF12-2, KURF15-2, KURF18-3)



3-4. PCB Control Instruction

3-3-1. Basic Operation

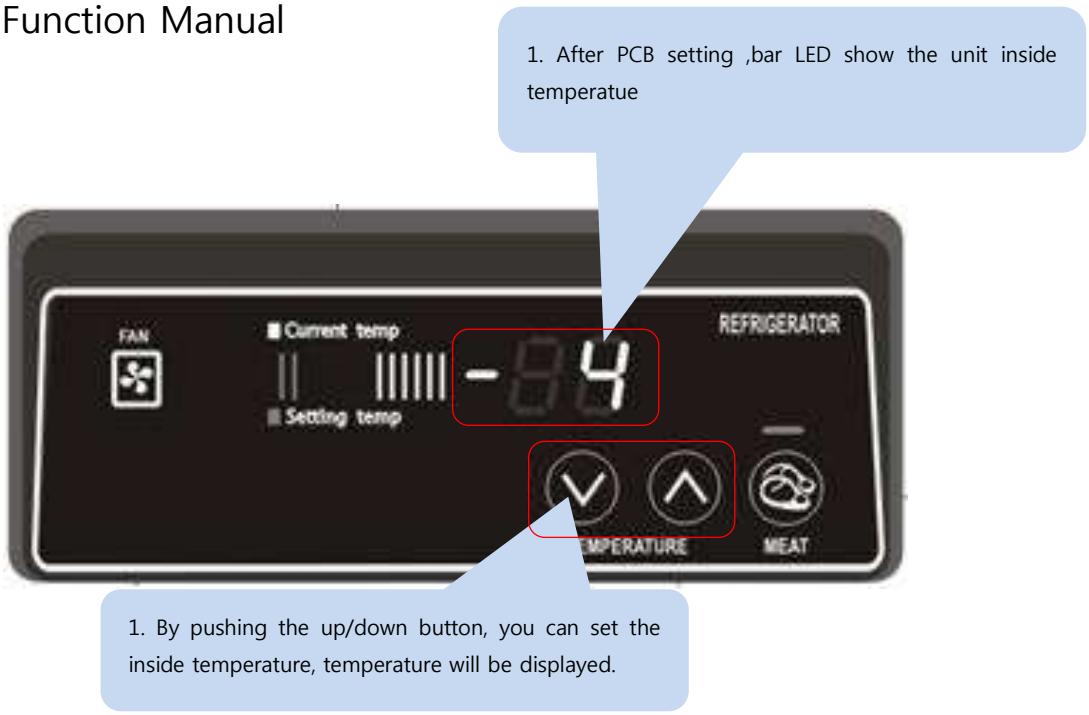
1) Plug in and the Display panel will be lighted and make a beep sound.
   The compressor will begin to run.
2) The compressor is automatically cycled by the electronic controller (PCB).
3) The Defrost cycle is automatically controlled by the PCB.
4) Good Air Flow in refrigerator unit is critical.
   Be careful to load product so that it neither presses against the back wall, nor reaches within four inches from the evaporator compartment.



5) When the inside temperature is lower than -45℃, the panel will display "LO".

6)Higher than +18℃, the panel will display "HI".

3-4. PCB Function Manual



3-4-1.How to set up manual defrost

Cancel the frosting function of evaporator.

STEP	OPERATION	DISPLAY	RESULT
Step 1	Push the ▼ ▲ button Five seconds.	SL	
Step 2	Push the ▼button once	dS	
Step 3	Push the ▼button once	dF	Start manual defrost

The shortest defrosting time is twenty minutes, the longest defrosting time is 40 minutes.

3-4-2. How to remove the manual defrosting

STEP	OPERATION	DISPLAY	RESULT
Step 1	Push the ▼ ▲ button Five seconds.	SL	
Step 2	Push the ▼button once	dS	
Step 3	Push the ▼button once	2	It will indicated the current inner temperature.

3-4-3. How to set up the correction of inside temperature

STEP	OPERATION	DISPLAY	RESULT
Step 1	Push the ▼ ▲ button Five seconds.		
Step 2	Push the ▼button twice time.		
			Now is the setting value.
Step 3	Push the ▲ button When changed	Setting value	Reference Table1

Table 1

Display	Description	Display	Description	Memo
"00"	**unchangeable**	" 50"	5.0℃ ↑	
"- 5"	0.5℃ ↓	" 45"	4.5℃ ↑

3-6. COMPRESSOR running、starting、stopping

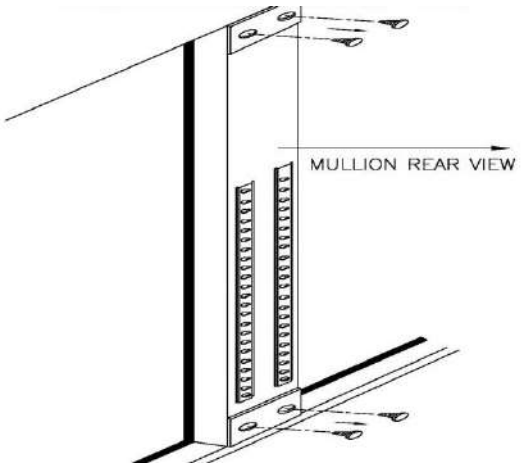
3-6-1. COMP running

- COMP will stop for 4 minutes. (When the comp stopped, comp will be banned running during the 4 minutes.)

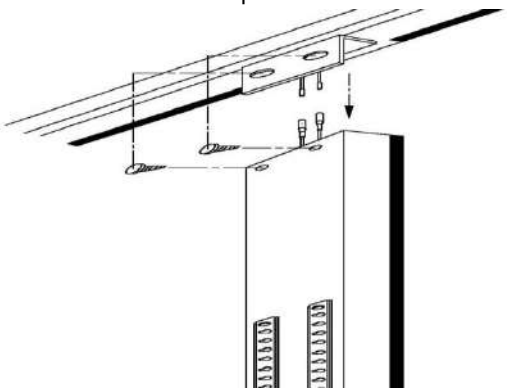
Section 4　Replacement Of Main Components

4-1. Mullion Heater replacement

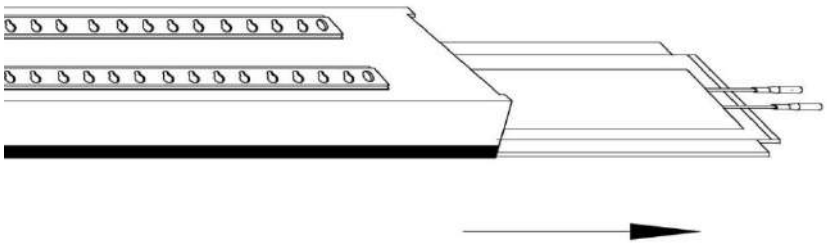
A. Unscrew the four screws from mullion .



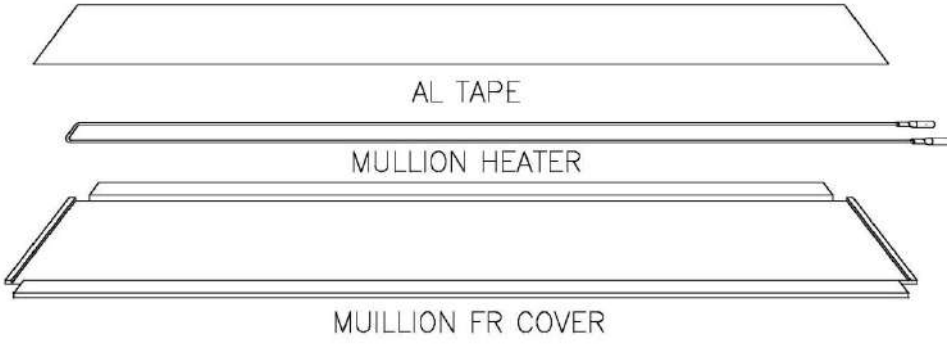
B.　Disconnect the connectors from Mullion Heater top.



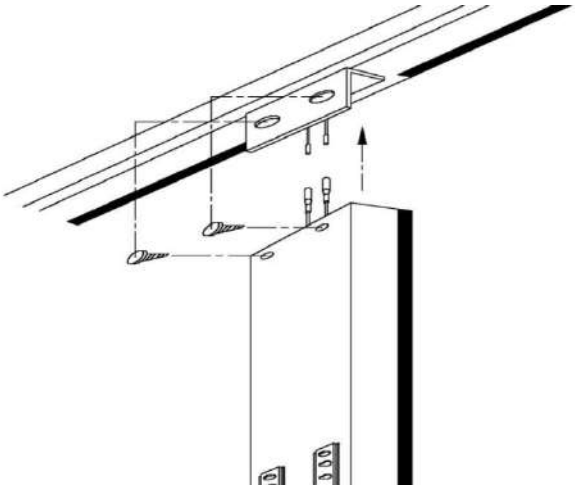
C. Take apart mullion front cover from mullion.



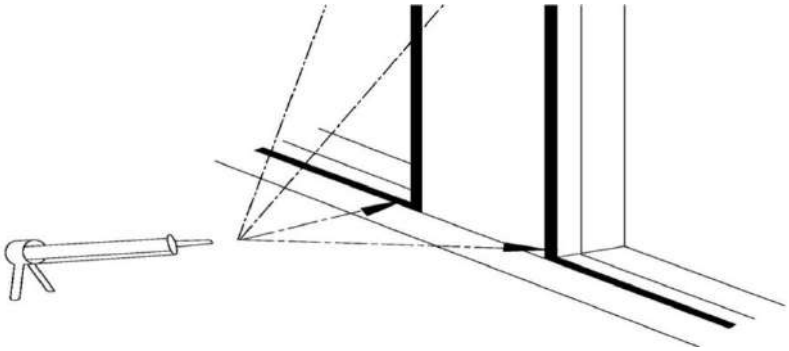
D. Pull out the heater from the inlet.



E. Reinstall the new mullion heater, do reversed in order.

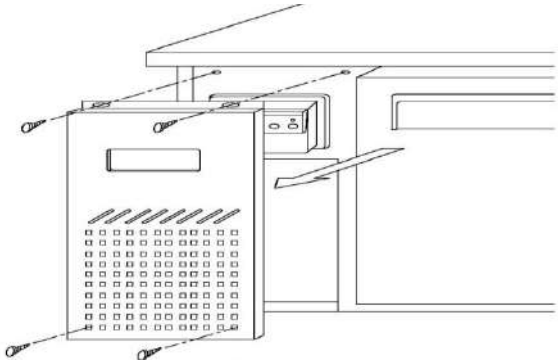


F. Seal gaps with silicon after installation.

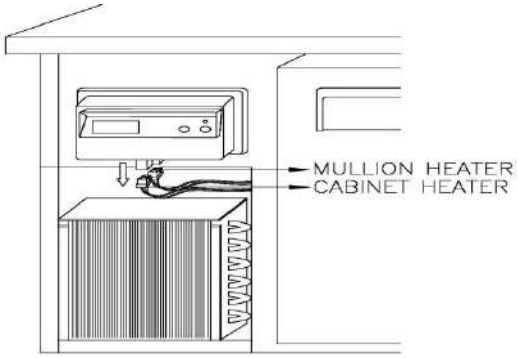


4-2. Cabinet Heater replacement

A. Disassemble Unit Front Cover.

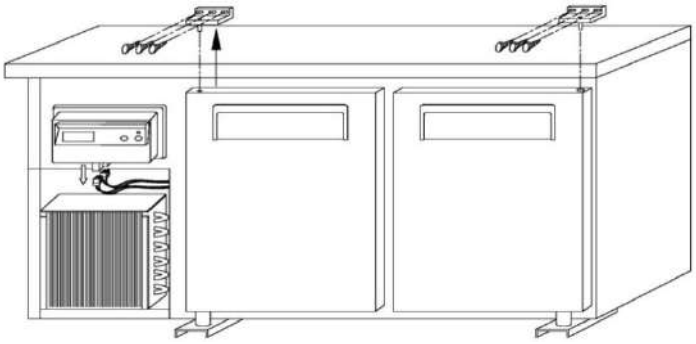


B. Disconnect housing connector.

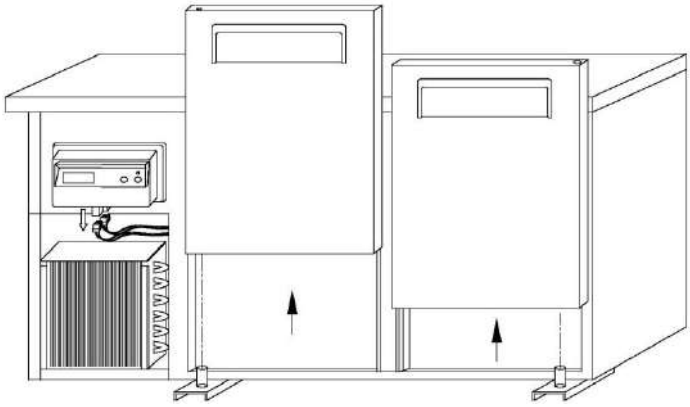


.

C. Unscrew the top hinge.

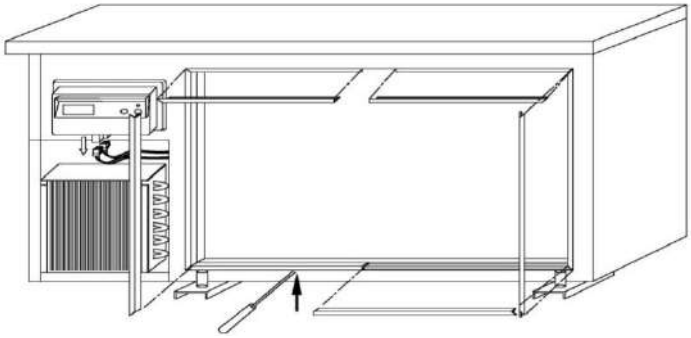


D. Lift the door and pull out the door.

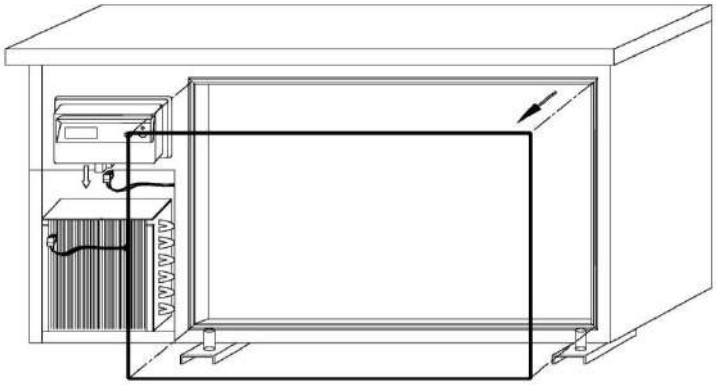


E. Insert the and edge of "-"type screw driver into the gap between the frame and frame cover, take apart the frame.

Pull out the heater from the inlet.

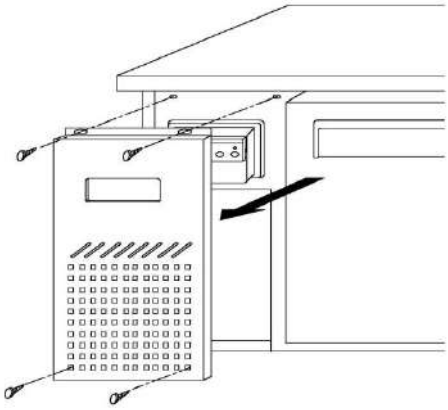


F. Insert new cabinet heater to the inlet.

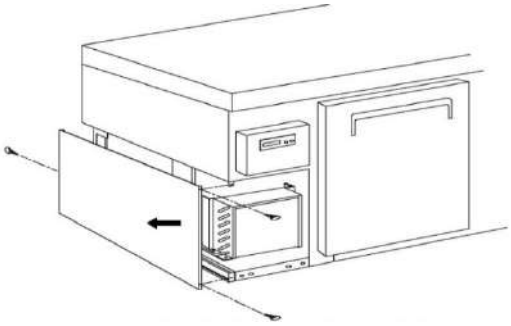


4-3. Refrigeration compartment replacement

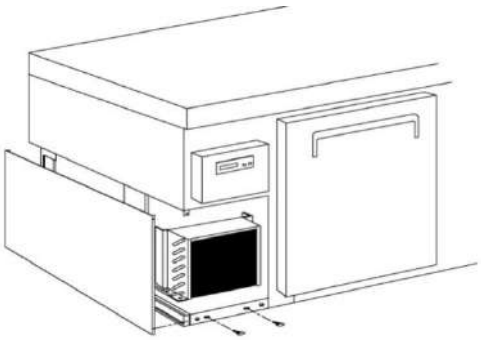
A. Disassemble Unit Front Cover..



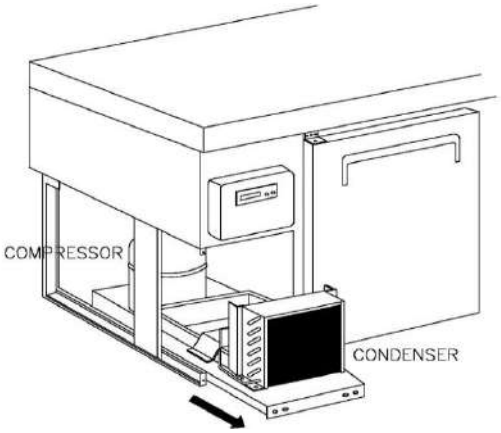
B. Unscrew unit Side Cover.



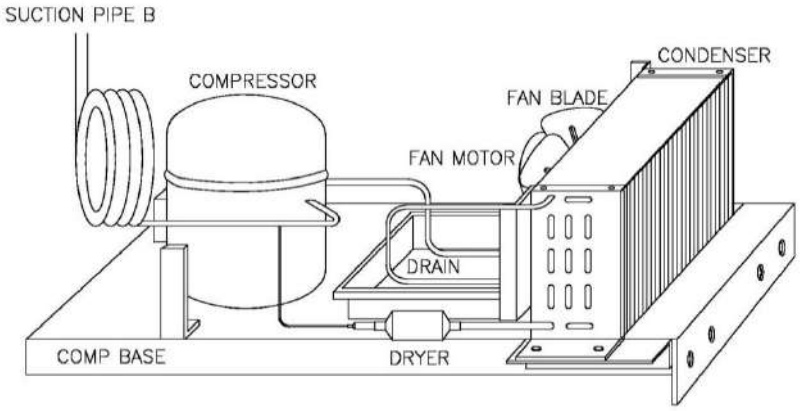
C. Unscrew the comp base.



D. ull out the condensing unit.

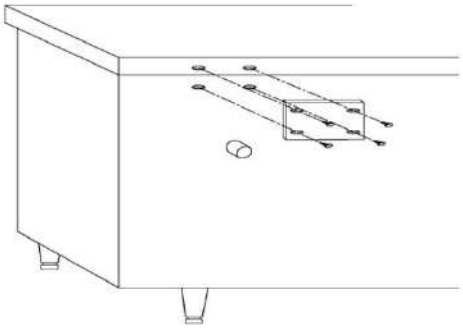


E. Refrigeration compartment

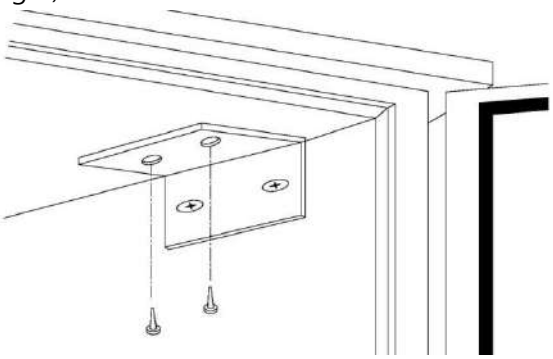


4-4.Remove Counter Top

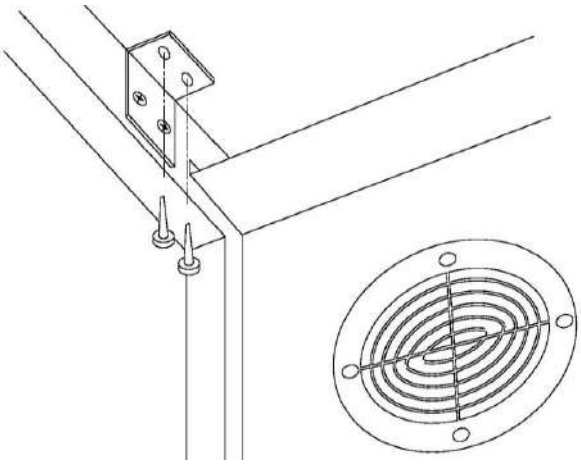
A.Unscrew the cabinet Reinforce.



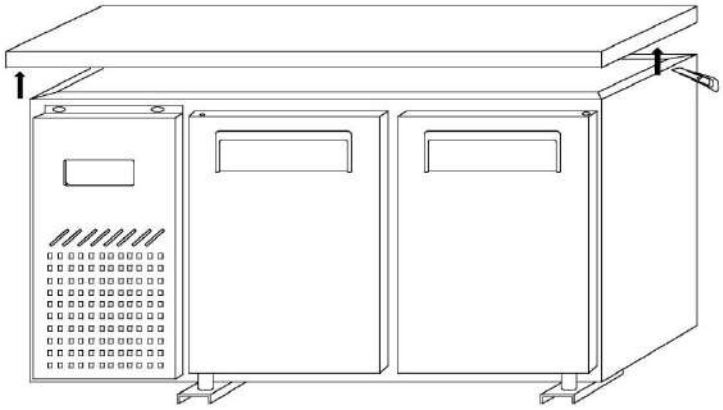
B.Unscrew the counter top bracket(Right).



C.Unscrew the counter top bracket(Left).

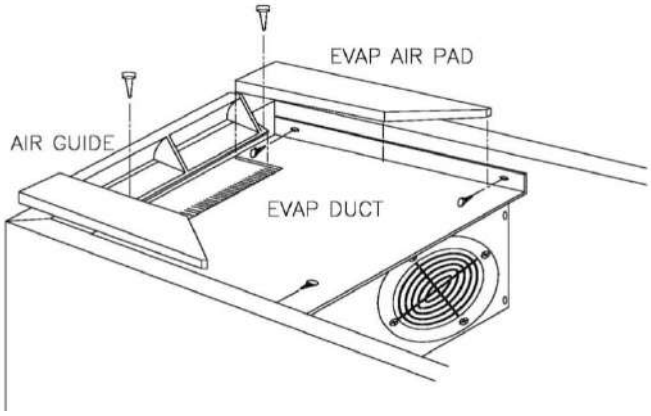


D. Cut the counter top out of cabinet as below.

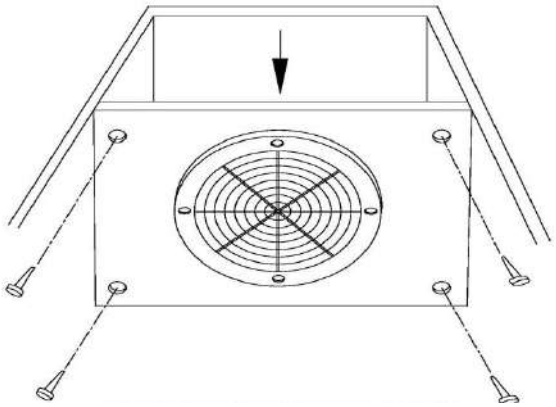


4-5.Remove Evap Motor

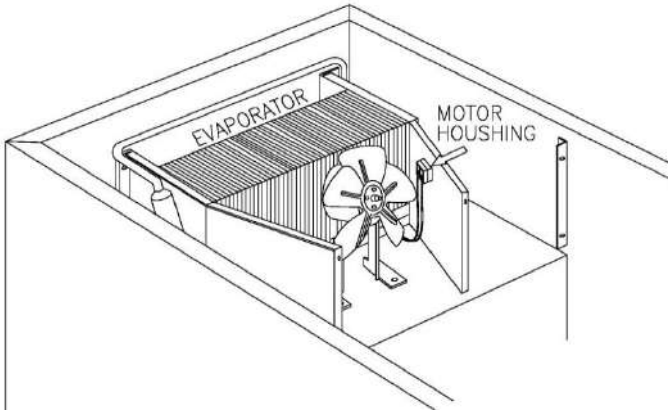
A. Disassemble counter top and do as below.



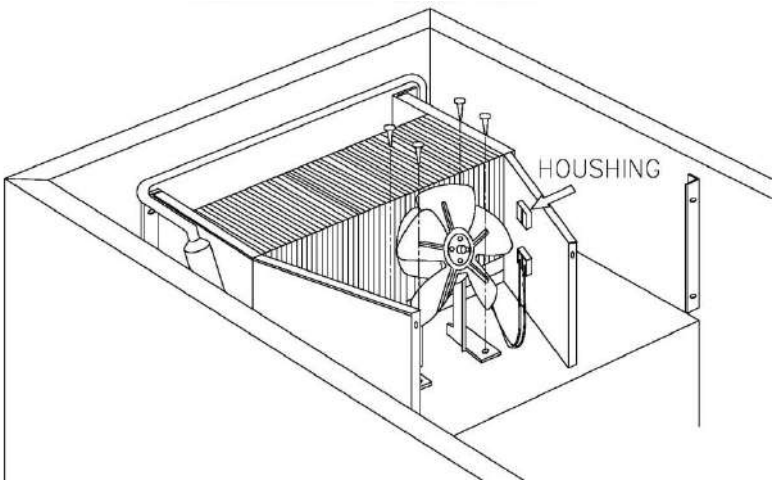
B. Unscrew evap cover.



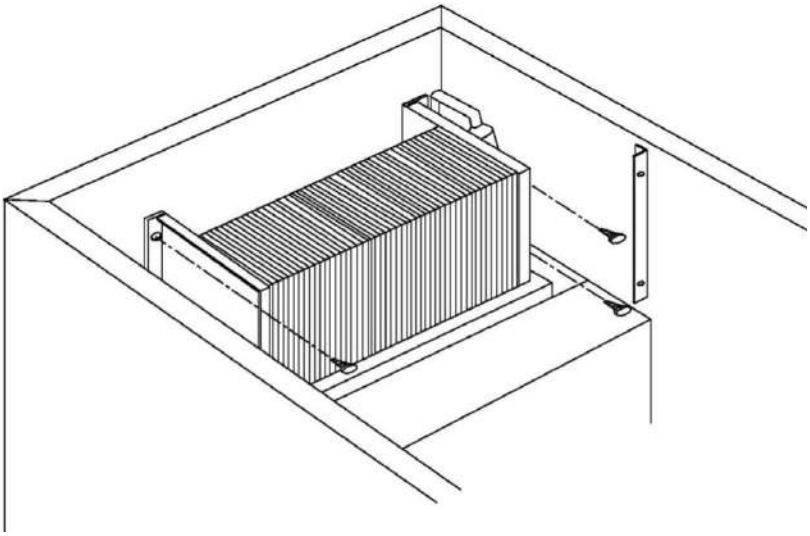
Take apart Evap Motor Housing.



Unscrew Evap Motor Bracket.



Remove Evap.

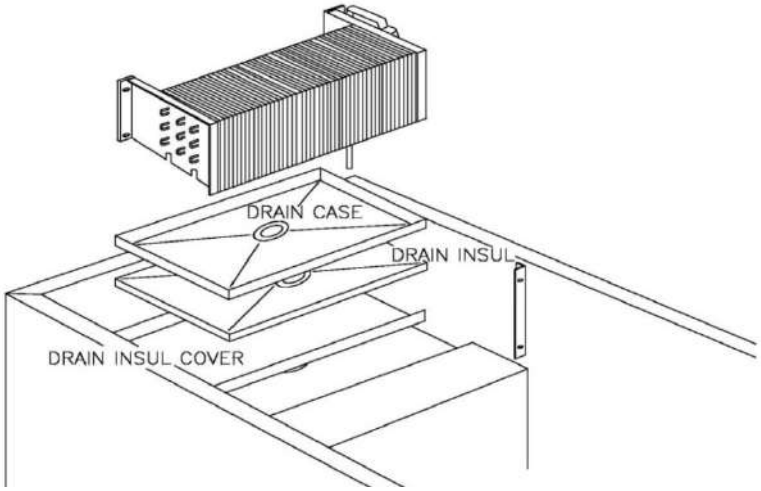


4-6.Remove Evaporator

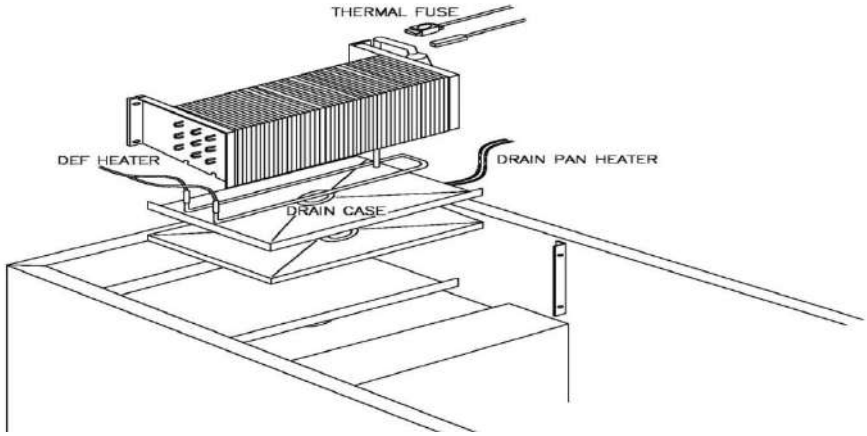
Disassemble Counter Top and Evap Motor, then do as below.

Unscrew Air Guide, disconnect sensor connector, take apart Air Guide.

- Reforgerator



- Freezer



.
